

INDUSTRIAL LUBRICANTS

S

REV.2 OF 03/2023

LEVELS OF QUALITY

LCA

The lubricants of the series LCA comply with the following levels of quality:

- Vickers V104C
- DIN 51506 VD-L

DESCRIPTION

The series of LCA oils are suitable for the lubrication of rotary, centrifugal and screw air compressors, for which a lower viscosity (32/46) is recommended; they are also suitable for the lubrication of single and multi-stage alternative compressors, working at very high pressures (up to 1000 bar), for which a higher viscosity (68 to 150) is recommended. They can be also used for rotary vane compressors with a 100-150 viscosity. LCA oils have remarkable EP features which make them suitable for the use under extreme conditions for the maximum temperature of 220°C.

They also show an excellent oxidation and corrosion resistance.

When you choose the oil characteristics to be used, it is recommended to always follow the manufacturer's recommendations.

| ISO VG | 32 | 46 | 68 | 100 | 150 |
|---------------------------------------|-----------------|-----------------|-----------------|--------------|---------------|
| Density at 15°C.Kg./dm3 ASTM D1298 | 0,872 | 0,880 | 0.885 | 0.900 | 0.900 |
| Viscosity at 40°C.cSt ASTM D445 | 28.8 to 35.2 | 41.4 to 50.6 | 61.2 to 74.8 | 90 to 110 | 135 to 165 |
| Viscosity at 100°C.cSt ASTM D445 | 5.3 | 7.0 | 8.7 | 11.5 | 14.3 |
